

Document 3 — Complete Web App Frontend Blueprint

OpenHealth

Complete Frontend Architecture, UI/UX, Screens, Components, Interactions & Responsive Design

Document Purpose

This document converts the OpenHealth product and technical architecture into a **complete frontend specification**.

It defines:

- the application sitemap
- public and authenticated experiences
- global layout
- navigation
- every major page
- page sections
- forms
- cards
- tables
- charts
- user interactions
- emergency UX
- AI result presentation
- loading/error/empty states
- responsive behavior
- reusable component architecture
- the visual hierarchy of the application

The frontend should make the OpenHealth healthcare decision journey visible:

DISCOVER → UNDERSTAND → COMPARE → VERIFY → CHECK AVAILABILITY → ESTIMATE → RESERVE → ANALYZE → DECIDE

The frontend is built with **React + Tailwind CSS**, with no TypeScript.

1. COMPLETE WEB APP STRUCTURE

The application should be divided into five major frontend experiences.

Public Experience

- 1. Landing Page**
 - 2. How OpenHealth Works**
 - 3. Hospital Discovery**
 - 4. Hospital Public Profile**
 - 5. Emergency Entry**
 - 6. Login / Signup**
-

Patient Experience

- 7. Patient Dashboard**
- 8. Smart Care Search**
- 9. Search Results**
- 10. Hospital Details**
- 11. Compare Hospitals**
- 12. Doctors**
- 13. Treatments**
- 14. Bed Availability**
- 15. Emergency Mode**
- 16. Bed Reservation**
- 17. Cost Prediction**
- 18. Insurance Checker**

- 19. Scheme Eligibility**
 - 20. Documents**
 - 21. Medical Report Analysis**
 - 22. Bills**
 - 23. Bill Analysis**
 - 24. Bookings**
 - 25. Saved Hospitals**
 - 26. Profile & Settings**
-

Hospital Experience

- 27. Hospital Dashboard**
 - 28. Hospital Profile**
 - 29. Bed Management**
 - 30. Doctor Management**
 - 31. Department Management**
 - 32. Treatment Management**
 - 33. Package Management**
 - 34. Booking Management**
 - 35. Hospital Analytics**
 - 36. Transparency Dashboard**
-

Platform Administration

- 37. Admin Dashboard
- 38. User Management
- 39. Hospital Verification
- 40. Doctor Verification
- 41. Scheme Management
- 42. Insurance Management
- 43. Platform Analytics
- 44. Audit Logs

2. GLOBAL APP LAYOUT

Every authenticated application page should use a consistent shell.

The public website should use a different marketing-oriented layout without the application sidebar.

3. SIDEBAR

Patient Navigation

Logo:

OpenHealth

Primary navigation:

-  Dashboard
-  Find Care
-  Hospitals
-  Doctors
-  Beds
-  Emergency
-  Documents
-  Costs & Coverage
-  Bills
-  Bookings
-  Saved

Bottom navigation:

-  Settings
 -  Profile
 -  Logout
-

Hospital Navigation

-  Dashboard
-  Hospital Profile
-  Beds
-  Doctors
-  Departments
-  Treatments
-  Packages
-  Bookings
-  Analytics
-  Transparency

Bottom:

-  Settings
 -  Profile
 -  Logout
-

Admin Navigation

-  Dashboard
-  Users

-  Hospitals
 -  Doctors
 -  Treatments
 -  Verification
 -  Insurance
 -  Schemes
 -  Analytics
 -  Audit Logs
 -  Settings
-

4. SIDEBAR BEHAVIOR

Desktop

Width:

240–260px

Sidebar remains visible.

Tablet

Sidebar becomes collapsible.

Mobile

Sidebar becomes a drawer.

☰ OpenHealth

The active navigation item should use:

- subtle background
 - strong accent
 - clear icon
 - bold label
 - active indicator
-

5. TOP NAVBAR

Left

Breadcrumb.

Example:

Find Care / Hospitals / City Hospital

For emergency mode:

Emergency / ICU Availability

Center

Optional global search.

Example:

Search hospitals, doctors, treatments...

Right

 Notifications

 Location

 Profile

Clicking the profile opens:

Profile
My Health Information
Settings
Logout

6. GLOBAL FOOTER

Keep authenticated application footers compact.

OpenHealth
Healthcare Discovery & Transparency

Privacy
Terms
Security
Methodology

Public website footer should be larger and include:

Platform
Patients
Hospitals

7. DESIGN PHILOSOPHY

OpenHealth should feel:

Trustworthy + Calm + Intelligent + Fast

Healthcare interfaces should avoid unnecessary visual noise.

The UI should prioritize:

1. clarity
2. confidence
3. speed
4. understandable information
5. obvious next actions

For normal workflows the interface should feel calm and professional.

For emergency workflows the interface should become:

high-contrast + simplified + action-focused.

8. GLOBAL DESIGN LANGUAGE

Primary visual hierarchy

Page heading
↓
Context / explanation
↓
Primary action
↓
Important information
↓
Supporting data

Avoid putting five competing CTAs on the same screen.

9. CORE UI COMPONENTS

Common

Button.jsx
Input.jsx
SearchInput.jsx
Select.jsx
Textarea.jsx
Checkbox.jsx
Radio.jsx
Switch.jsx
Modal.jsx
Drawer.jsx
Dropdown.jsx
Tooltip.jsx
Toast.jsx
Loader.jsx
Skeleton.jsx
EmptyState.jsx
ErrorState.jsx
ConfirmDialog.jsx
Badge.jsx
Avatar.jsx

10. HEALTHCARE-SPECIFIC COMPONENTS

HospitalCard.jsx
HospitalBadge.jsx
HospitalVerificationBadge.jsx
DoctorCard.jsx
TreatmentCard.jsx
PackageCard.jsx
BedAvailabilityCard.jsx
BedStatusBadge.jsx
BookingCard.jsx
TransparencyScore.jsx
BillShockIndex.jsx
CostRangeCard.jsx
CoverageCard.jsx
EligibilityCard.jsx
DocumentCard.jsx
AIInsightCard.jsx
MedicalTermBadge.jsx
EmergencyActionCard.jsx

11. GLOBAL UX STATES

Every major page must support the following.

Loading

Examples:

Finding hospitals near you...
Checking bed availability...
Analyzing your medical report...
Reading your bill...

Use skeletons where possible instead of blank spaces.

Empty

Examples:

No saved hospitals yet.
No upcoming bookings.
No documents have been uploaded.

Error

Examples:

We couldn't load hospital availability.
Please try again.
The document could not be processed.

Success

Examples:

✓ Hospital saved successfully.
✓ Bed reservation created.
✓ Bill analysis completed.

12. PUBLIC PAGE 1 — LANDING PAGE

The landing page is the first impression of OpenHealth.

Its goal is not to explain every database feature.

Its goal is to communicate:

Better healthcare decisions start with better information.

Hero Section

Heading

Find the Right Care. Know What to Expect.

Supporting text

Find suitable hospitals, understand treatment costs, check available beds, and make more informed healthcare decisions with AI-powered insights.

Primary CTA

Find Healthcare

Secondary CTA

Explore OpenHealth

Emergency CTA

Emergency Bed Search

The emergency action should remain visibly accessible without overpowering the normal experience.

13. LANDING — TRUST INDICATORS

Immediately below the hero:

- ✓ Hospital Discovery
- ✓ Live Availability
- ✓ Cost Intelligence
- ✓ AI Document Analysis
- ✓ Insurance & Scheme Checks

Use small visual indicators rather than a large paragraph.

14. LANDING — SMART SEARCH DEMO

Show an interactive search experience.

Example:

What are you looking for?

[Knee replacement near me ]

Quick suggestions:

Find a hospital
Find a doctor
Find treatment
Find ICU bed

As the user searches, show example results.

15. LANDING — HOSPITAL COMPARISON DEMO

Show three hospitals side by side.

Example:

CityCare Hospital
Transparency 88
ICU: Available
₹1.9L-₹2.3L

Metro Medical Center
Transparency 82
ICU: Limited
₹2.1L-₹2.6L

Community Health Hospital
Transparency 76
ICU: Available
₹1.6L-₹2.0L

Then:

Compare hospitals →

This demonstrates the platform's central decision-support capability.

16. LANDING — AI DOCUMENT INTELLIGENCE

Show two cards.

Medical Report

Upload Report

↓

AI extracts healthcare information

↓

Find relevant specialty

Medical Bill

Upload Bill

↓

AI extracts line items

↓

Understand your charges

CTA:

See AI Analysis

17. LANDING — COST TRANSPARENCY

Headline:

Know the likely cost before treatment.

Display:

Treatment

Knee Replacement

Estimated range

₹1.9L — ₹2.3L

Below:

Insurance coverage

₹1.5L

Estimated patient contribution
₹40K — ₹80K

The objective is to communicate cost clarity rather than promise an exact medical bill.

18. LANDING — EMERGENCY EXPERIENCE

Use a strong section:

Need a Bed Right Now?

Find nearby available ICU

↓

Check availability

↓

Reserve

CTA:

Find an Emergency Bed

19. LANDING — TRANSPARENCY

Show:

Hospital Transparency
86 / 100

Price clarity	Good
Package clarity	Excellent
Data freshness	Excellent
Billing consistency	Good
Verification	Excellent

Explain:

Compare healthcare options using measurable transparency signals—not just popularity.

20. LANDING — HOW IT WORKS

Four steps:

01 — DISCOVER

Find hospitals, doctors, departments, and treatments.

02 — UNDERSTAND

Use AI to analyze reports, bills, and healthcare information.

03 — VERIFY

Check price, availability, insurance, schemes, and transparency.

04 — DECIDE

Compare and choose the healthcare option that fits your needs.

21. LANDING — FINAL CTA

Large final section:

Healthcare decisions should not feel like guesswork.

Button:

Start Finding Care →

Secondary:

Emergency Bed Search

22. PAGE 2 — LOGIN

Keep login extremely clean.

Left Side

OpenHealth branding with healthcare visual.

Right Side

Welcome Back

[Sign In]

Forgot password?

_____ OR _____

Continue with Google

Don't have an account?
Create Account

23. PAGE 3 — SIGNUP

Collect only essential information initially.

Create your OpenHealth account

Full Name
Email
Phone
Password

Account Type

- Patient
- Hospital
- Insurance / Provider

[Create Account]

Do not make onboarding unnecessarily long.

24. PAGE 4 — ONBOARDING

For patients:

Step 1 — About You

- Name
- Location
- Preferred language

Step 2 — Healthcare Preferences

- preferred distance
- insurance provider
- government scheme
- preferred hospitals

Step 3 — Finish

Your OpenHealth profile is ready.

CTA:

Find Healthcare →

25. PATIENT PAGE 5 — DASHBOARD

This is the patient's command center.

Top:

Good morning 🙋
How can we help today?

Primary search:

Search hospitals, doctors, treatments...

Emergency button:

 **Need an ICU Bed?**

26. DASHBOARD — QUICK ACTIONS

Four primary actions:

-  Find Hospital
 -  Find Bed
 -  Analyze Report
 -  Analyze Bill
-

27. DASHBOARD — ACTIVE BOOKING

Card:

Upcoming Booking

City Hospital
Orthopedic Department

Tomorrow · 10:30 AM

[View Booking →](#)

28. DASHBOARD — SAVED HOSPITALS

Show recently saved hospitals.

Each card:

- hospital name
 - distance
 - transparency score
 - availability
 - estimated cost
 - View button
-

29. DASHBOARD — RECENT DOCUMENTS

Show:

Knee MRI Report
Analyzed
2 hours ago

City Hospital Bill
Analyzed
Yesterday

30. DASHBOARD — COVERAGE SNAPSHOT

Show:

Insurance

✓ Active

Government Scheme

✓ Eligible for selected services

CTA:

Check Coverage →

31. DASHBOARD — AI HEALTH ASSISTANT

Show a compact assistant card.

OpenHealth Assistant

Tell me what you need help finding.

[Describe your healthcare need...]

[Find Care]

The assistant should feel like a navigation tool, not a generic chatbot.

32. PAGE 6 — SMART CARE SEARCH

Header:

What healthcare are you looking for?

Large search field:

Describe a symptom, treatment, or specialist...

Search modes:

Symptoms

Treatments

Departments

Doctors

Hospitals

33. SMART SEARCH — SUGGESTIONS

While typing:

Knee pain
Knee replacement
Orthopedic specialist
Orthopedic hospital

The user should be able to choose the interpretation rather than having the platform silently assume one.

34. PAGE 7 — SEARCH RESULTS

Top section:

Search Results

Knee replacement
32 hospitals found

 Within 15 km

Filters:

Distance
Price
Bed Availability
Insurance
Government Schemes
Transparency
Hospital Type

35. SEARCH RESULT CARD

Each hospital card should show:

CityCare Hospital
✓ Verified

4.2 km away

Orthopedics
8 specialists

ICU
3 available

Estimated treatment
₹1.9L - ₹2.3L

Transparency

[View Hospital]
[Compare]

Do not overload the card.

36. SEARCH — MAP VIEW

Desktop can support:

Search Results	MAP
Hospital A Hospital B Hospital C	

Mobile should default to list view and provide a map toggle.

37. PAGE 8 — HOSPITAL DETAILS

Header:

CityCare Hospital
✓ Verified

4.2 km · Open

Primary actions:

[Call]
[Get Directions]
[Check Beds]
[Book]

38. HOSPITAL DETAILS — INFORMATION TABS

Tabs:

Overview

Doctors
Departments
Treatments
Packages
Beds
Transparency

This avoids making one extremely long page.

39. HOSPITAL DETAILS — OVERVIEW

Show:

- hospital description
- facilities
- emergency services
- specialties
- operating information
- verification status

40. HOSPITAL DETAILS — DOCTORS

Doctor card:

Dr. Ananya Sharma

89. PAGE 44 — AUDIT LOGS

Table:

User	Action	Entity	Timestamp
Admin	Hospital verified	Hospital	10:42
Staff	Bed updated	ICU	10:38
Patient	Bill uploaded	Bill	10:20

Make sensitive metadata visible only to authorized administrators.

90. GLOBAL SEARCH EXPERIENCE

Search should remain accessible throughout the authenticated patient experience.

Search placeholder:

Search hospitals, doctors, treatments...

Results should categorize:

Hospitals
Doctors
Treatments
Departments

Example:

Hospitals
CityCare Hospital

Doctors
Dr. Ananya Sharma

Treatments
Knee Replacement

91. GLOBAL MAP EXPERIENCE

Map should be used when location materially helps the user.

Primary use cases:

- nearby hospitals
- emergency search
- bed availability
- hospital comparison

Hospital map markers should contain lightweight information:

CityCare
ICU: 3
4.2 km

92. AI INTERACTION DESIGN

The AI interface should avoid looking like a generic messaging app everywhere.

Instead, AI should appear where it provides a concrete benefit.

Examples:

-  AI Report Summary
-  Why was this hospital recommended?
-  Explain this bill
-  What does this medical term mean?

This makes AI contextual.

93. AI RECOMMENDATION CARD

Example:

Why this hospital?

This hospital matches your search because:

- ✓ Orthopedic department available
- ✓ Relevant specialist available
- ✓ ICU currently available
- ✓ Within your preferred distance
- ✓ Insurance supported
- ✓ High transparency score

[View Hospital]

94. DOCUMENT PROCESSING UI

The user should always understand what is happening.

Upload
↓
Processing
↓
Extracting
↓
Analyzing
↓
Completed

Never display a blank screen while the AI service is processing.

95. BILL ANALYSIS VISUAL SYSTEM

Use three layers:

Layer 1 — Total

₹2,05,000

Layer 2 — Breakdown

Donut/bar chart.

Layer 3 — Explanation

Your final bill is ₹25,000 above the initial estimate.
The largest contributors were:
Procedure +₹15,000
Diagnostics +₹6,000
Medicines +₹4,000

This creates an understandable narrative.

96. COST PREDICTION VISUAL SYSTEM

Never display a bare number.

Instead:

Estimated Cost

₹1.9L — ₹2.3L

Expected range

Lower estimate — Higher estimate

Then explain:

Based on:
Hospital
Treatment
Room type
Historical pricing
Available package information

97. BED AVAILABILITY VISUAL SYSTEM

Use consistent status semantics.

● Full

Unknown / stale

○ Data unavailable

Do not imply real-time certainty when the underlying data is stale.

98. TRANSPARENCY SCORE VISUAL SYSTEM

Primary:

88 / 100

Then category bars.

Each score should have an explanation tooltip.

Example:

Data Freshness
94

What does this mean?
How recently hospital resource information
was updated.

99. BILL SHOCK INDEX VISUAL SYSTEM

Use:

Low
Moderate
High

alongside:

- initial estimate
- final amount
- variance
- major reasons

Do not use an alarming design unless the deviation is genuinely significant.

100. PATIENT NOTIFICATIONS

Notification categories:

Bed reservation
Booking status
Coverage result
Document analysis
Hospital updates
Security

Example:

 Bed Reservation Confirmed

CityCare Hospital confirmed your ICU reservation.

2 minutes ago

101. RESPONSIVE DESIGN

Desktop

Sidebar + Navbar + Main Content

Use multi-column layouts.

Tablet

Collapsible Sidebar
Main Content

Mobile

Top bar
Content
Bottom actions where appropriate

Cards should collapse to single-column layouts.

Comparison tables should support horizontal scrolling.

Charts should become horizontally scrollable or switch to simplified mobile versions.

102. MOBILE EMERGENCY DESIGN

Emergency mode gets special treatment.

Mobile layout:

The user should not navigate through normal dashboard screens first.

103. COMPONENT REUSABILITY

The same component should work across multiple pages.

For example:

```
<HospitalCard
  hospital={hospital}
  showAvailability={true}
  showTransparency={true}
  showCost={true}
/>
```

The same underlying component can therefore appear in:

- search results
- saved hospitals
- recommendations
- comparison
- emergency results

104. ROUTING STRUCTURE

Conceptually:

```
/
├── landing
├── how-it-works
├── hospitals
├── hospitals/:id
├── emergency
├── login
├── signup
└── app
    ├── dashboard
    ├── search
    ├── hospitals
    ├── hospitals/:id
    ├── compare
    ├── doctors
    ├── treatments
    ├── beds
    ├── emergency
    ├── bookings
    ├── documents
    ├── reports
    ├── bills
    ├── costs
    ├── insurance
    ├── schemes
    ├── saved
    └── settings
```

Hospital:

```
/hospital
├── dashboard
├── profile
├── beds
├── doctors
├── departments
├── treatments
├── packages
├── bookings
├── analytics
└── transparency
```

Admin:

```
/admin
├── dashboard
├── users
└── hospitals
```

- doctors
- verification
- schemes
- insurance
- analytics
- audit-logs

105. FRONTEND COMPONENT MAPPING

pages/

- public/
 - Landing.jsx
 - HowItWorks.jsx
 - HospitalDiscovery.jsx
 - HospitalPublicProfile.jsx
- auth/
 - Login.jsx
 - Signup.jsx
 - Onboarding.jsx
- patient/
 - Dashboard.jsx
 - Search.jsx
 - SearchResults.jsx
 - HospitalDetails.jsx
 - CompareHospitals.jsx
 - Doctors.jsx
 - Treatments.jsx
 - Beds.jsx
 - Emergency.jsx
 - BedReservation.jsx
 - CostPrediction.jsx

 - SchemeChecker.jsx
 - Documents.jsx
 - ReportAnalysis.jsx
 - Bills.jsx
 - BillAnalysis.jsx
 - Bookings.jsx
 - SavedHospitals.jsx
 - Settings.jsx
- hospital/
 - Dashboard.jsx
 - Profile.jsx
 - Beds.jsx
 - Doctors.jsx
 - Departments.jsx
 - Treatments.jsx
 - Packages.jsx
 - Bookings.jsx
 - Analytics.jsx
 - Transparency.jsx

```
└─ admin/
   └─ Dashboard.jsx
   └─ Users.jsx
   └─ Hospitals.jsx
   └─ Doctors.jsx
   └─ Verification.jsx
   └─ Schemes.jsx
   └─ Insurance.jsx
   └─ Analytics.jsx
   └─ AuditLogs.jsx
```

106. GLOBAL COMPONENT GROUPING

```
components/
├─ common/
├─ layout/
├─ dashboard/
├─ search/
├─ hospitals/
├─ doctors/
├─ treatments/
├─ beds/
├─ emergency/
├─ bookings/
├─ documents/
├─ reports/
├─ bills/
├─ costs/
├─ insurance/
├─ schemes/
├─ transparency/
└─ admin/
```

This keeps components grouped by actual product domain.

107. CORE VISUALIZATION SYSTEM

OpenHealth should not use charts everywhere.

Use visualizations only when they communicate meaningful information.

Recommended charts

Patient

- cost breakdown
- hospital comparison
- bill composition

- estimate vs final

Hospital

- bed utilization
- booking trends
- treatment demand
- package interest

Admin

- platform growth
- hospital growth
- bookings
- emergency demand

	3 hospitals
	[Find Matching Care]

112. BILL ANALYSIS WIREFRAME

Bill Analysis	
Total Bill ₹2,05,000	
Cost Breakdown	Estimate vs Final
Procedure 45%	Initial ₹1,80,000
Room 18%	Final ₹2,05,000
Medicines 16%	Difference +₹25,000
Diagnostics 12%	
Other 9%	Bill Shock Index MODERATE
Extracted Line Items	
Procedure	₹92,000
Room	₹36,000
Diagnostics	₹24,000

113. UX RULE — ALWAYS EXPLAIN WHY

OpenHealth should avoid unexplained recommendations.

For every recommendation, show:

Why was this recommended?

For example:

Recommended because:

✓ treatment available

✓ nearby

- ✓ bed available
 - ✓ insurance supported
 - ✓ high transparency
-

114. UX RULE — ALWAYS SHOW DATA FRESHNESS

For operational data such as beds, use:

Updated 4 minutes ago

or:

Last reported 2 hours ago

This is especially important because “live” availability is only useful when users understand how current it is.

115. UX RULE — DON'T CONFUSE ESTIMATE WITH ACTUAL

The frontend should clearly label:

Estimated
Predicted
Reported
Verified
Actual

Example:

Estimated treatment cost
₹1.9L–₹2.3L

not:

Treatment cost: ₹2.1L

unless it represents a verified package price.

116. UX RULE — PROGRESSIVE DISCLOSURE

Do not show every piece of hospital information at once.

The hierarchy should be:

Core answer
↓
Important supporting information
↓
Detailed information
↓
Advanced information

Example:

Hospital Card:

availability + cost + transparency

Hospital Detail:

doctors + treatments + packages + beds

Deep detail:

methodology + verification + historical information

117. FINAL FRONTEND EXPERIENCE

The ideal OpenHealth experience should feel like:

User Need
↓
Simple Search
↓
Useful Results
↓
Clear Comparison
↓
Transparent Cost
↓
Coverage Check
↓
Availability
↓

Action

Rather than forcing the user through disconnected healthcare websites and manual calls.

118. CORE FRONTEND BUILD PRIORITY

The first frontend implementation should prioritize these pages:

Tier 1 — Essential Demo

Login
Dashboard
Smart Search
Search Results
Hospital Details
Compare Hospitals
Bed Availability
Emergency
Cost Prediction
Report Analysis
Bill Analysis
Insurance Checker
Bookings

Tier 2

Doctors
Treatments
Packages
Saved Hospitals
Documents
Scheme Checker
Hospital Dashboard
Bed Management
Transparency Dashboard

Tier 3

Admin Analytics
Advanced Hospital Analytics
Audit Logs
Advanced profile controls
Additional settings

119. THE HERO FRONTEND INTERACTION

The most important interaction for the OpenHealth frontend should be the **Healthcare Decision Flow**:

Patient says:
"Knee replacement near me"
↓
AI / Search understands request
↓
Relevant hospitals
↓
Compare:
Cost
Doctors
Availability
Insurance
Transparency
↓
Select Hospital
↓
Check Bed
↓
Check Coverage
↓
Estimate Cost
↓
Reserve / Decide

The interface should make this chain feel like **one continuous experience**, not twelve disconnected pages.

120. FINAL FRONTEND PRINCIPLE

Every major OpenHealth screen should answer four questions:

What am I looking at?

Why does it matter?

What can I do next?

What information supports this decision?

The frontend should therefore prioritize **clarity over density, action over decoration, and explainability over complexity**.

The core OpenHealth UI is not intended to be a generic healthcare dashboard. It is a **decision-support interface** that brings hospital discovery, availability, cost, insurance, AI document analysis, and transparency together in a single user journey. This directly reflects the capabilities defined in the submitted project concept.
